

Placement in Employment, 2022 Graduates

The information provided here was compiled from the Springfield Technical Community College Graduate Placement Survey. Its purpose is to gather information on the graduates' educational and employment activities in the 9-12 month period after their graduation from STCC. The survey is administered each spring to the previous academic year's graduating class, with a follow-up mailing to non-respondents approximately 5-6 months later. The responses to the survey are used in part for the completion of the Career and Technical Education data report as required by the Carl D. Perkins Career and Technical Education Act of 2006.

Overall, **78%** of job-seeking respondents in the **2022** graduating class were employed at the time of the survey, and **56%** were employed in a field related to their program of study. The placement information for all individual programs was below 10. Due to privacy regulations, information for individual programs is not shown. Instead employment outcomes are presented by each school division.

Employment Status of Job-seeking Respondents, 2022

Academic School/Divison	Employed	Employed in a Related Field	Employed in an Unrelated Field
Liberal Arts and Professional Studies	57%	37%	63%
Science, Engineering, Technology, and Math	86%	59%	41%
Health and Patient Simulation	92%	71%	29%
