

STCC students find inspiration among women engineers

Student Darya Bandarchuk was nearly 2,000 miles from Springfield Technical Community College, but she felt at home at the Society of Women Engineers Annual Conference.

Ms. Bandarchuk, of West Springfield, was one of eight STCC students who traveled to Austin, Texas, for the SWE, where they joined 14,000 attendees, including college students, academic women and professional women. Ms. Bandarchuk said she loved the opportunity to meet women who are interested in engineering.

"It was great," she said. "It was my second time going to a SWE conference. There are not a lot of events like the SWE conference. You get completely immersed in engineering. You get to go to a career fair, which is a great opportunity."

The conference, which was held in October, is billed as the world's largest conference and career fair for women in engineering and technology. STCC prepares students for careers in the STEM fields — science, technology, engineering and mathematics.

Another computer science student who attended, Clair Yiting Gu, of Springfield, said the conference was "awesome."

"You see a lot of women engineers there," she said. "You feel like you are not alone. It's very exciting."

Beth McGinnis-Cavanaugh, professor of physics and engineering at STCC and the SWE faculty advisor, helped raise money to bring a contingent of students and three faculty and staff to the conference. She said STCC was better represented than any other community college in the country.

The conference provided an opportu-

nity to attend workshops and meet with major employers from technology companies such as Google, Amazon and Texas Instruments, among others.

STCC students who want to transfer after receiving their two-year associate degree were able to meet with representatives from four-year engineering programs.

community colleges. STCC staff member Isabel Huff presented on gender stereotypes that can hold women back from pursuing careers in STEM.

"They're exposed to students from all over the country, mainly from four-year schools," Ms. McGinnis-Cavanaugh said of STCC's contingent. "They're also exposed to a lot of professional women and professionals who are there recruiting. They have a huge career fair. They do on-site interviews and resume reviews. For our students, it's great exposure. They don't generally have these kinds of opportunities."

While the employers were mainly looking to hire students graduating with four-year degrees, STCC students received a tremendous opportunity to practice interview skills, obtain feedback on their resumes and chat with professionals in the field, Ms. McGinnis-Cavanaugh said. As engineering is still a field dominated by men, most companies are seeking a more diverse workforce and are eager to hire qualified women.

"It was an unbelievable event, and it was great that the college supported their trip," Ms. McGinnis-Cavanaugh said. "We had at least one student who had never been on a plane before. To have an opportunity to visit a city like Austin, which is a real tech hub, and then be with 14,000 women who are in STEM, is pretty incredible."

If in interested in applying to an engineering (or other program) at STCC visit www.stcc.edu/apply or call Admissions at (413) 755-3333.

STCC students and staff participated in presentations at the conference. Ms. McGinnis-Cavanaugh's presentation focused on a proposal to form a SWE network among the 15 Massachusetts
